

CORD – Technical Overview

Larry Peterson
Open Networking Lab

CORD
Central Office Re-architected as a Datacenter

#OpenCORD

What is CORD?

CORD is a Vision

A goal the open source community is working towards

Start with Business Case → Reduce to Design Requirements

CORD is an Architecture

A collection of abstractions and interfaces

Start with an Organizing Principle → Iterate-and-Refine

CORD is a Reference Implementation

An integrated system built from concrete components

Make Technology Choices → Be More Inclusive with Time

Large number of complex facilities

- AT&T alone operates 4-5k Central Offices

- Each serves 10-100k residential, enterprise & mobile customers

Evolved piecemeal over the past 40-50 years

- Source of huge CAPEX/OPEX costs

- Difficult to introduce new services

- Especially when compared to OTT cloud providers!

Economies of a datacenter

*Infrastructure built with a few commodity building blocks
using open source software and white-box switches*

Agility of a cloud provider

Software platforms that enable rapid creation of new services

*From Access-as-a-Service to Software-as-a-Service
Both Bundled Legacy and Disaggregated Greenfield*

CORD Vision – Requirements

Economies of Commodity Hardware

Architect to achieve the performance and reliability of purpose-built hardware on commodity servers and white-box.

Enable Innovative Services

Architect to support the full range of services

- Access-as-a-Service and Software-as-a-Service*
- Data Plane (NFV) and Control Plane (SDN)*
- Bundled Legacy and Disaggregated Greenfield*
- Trusted Operator-Defined and Untrusted 3rd Party*

CORD Vision – Requirements

Extensible and Controllable

Architect a Northbound Interface that allows operators to configure, control, and extend a deployment.

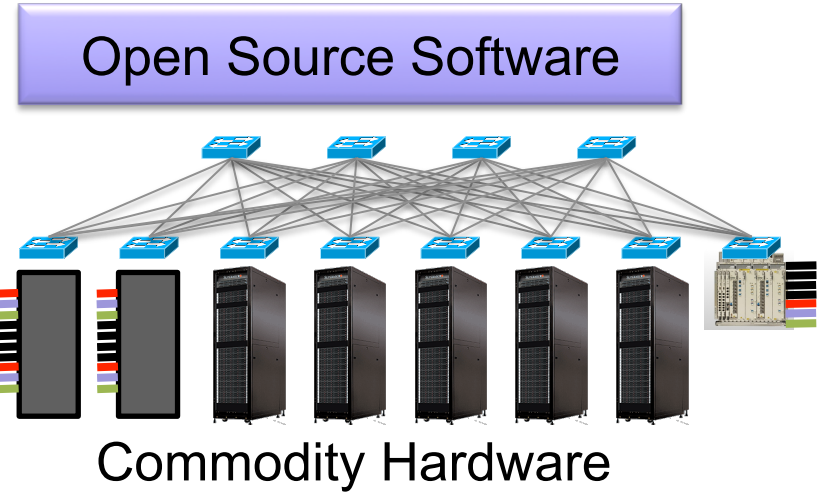

Multi-Domain Security

Architect to minimize trusted code base, mediate trust, and support the principle of least privilege.

Operational Robustness

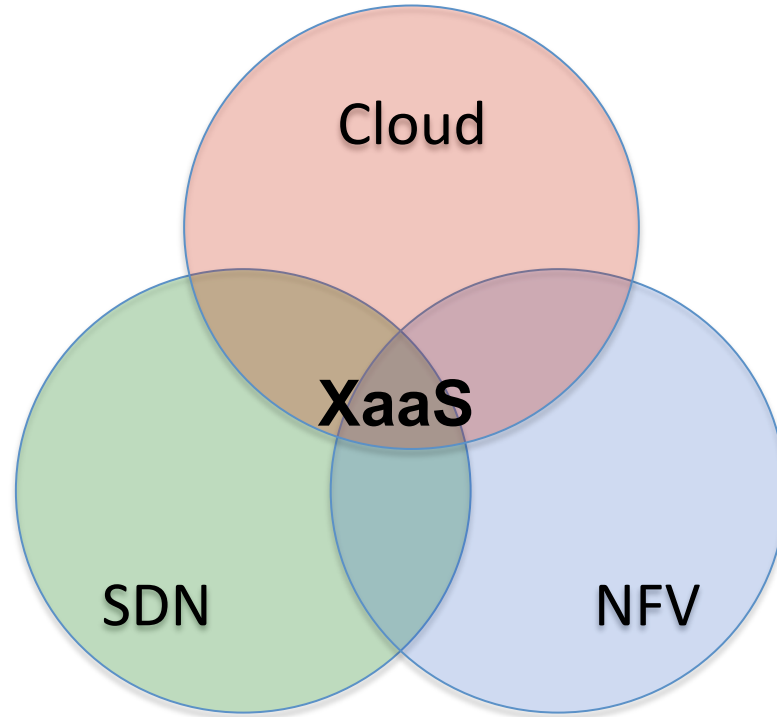

Architect to minimize service disruption in the face of transient and partial failures.

CORD Architecture

Everything-as-a-Service

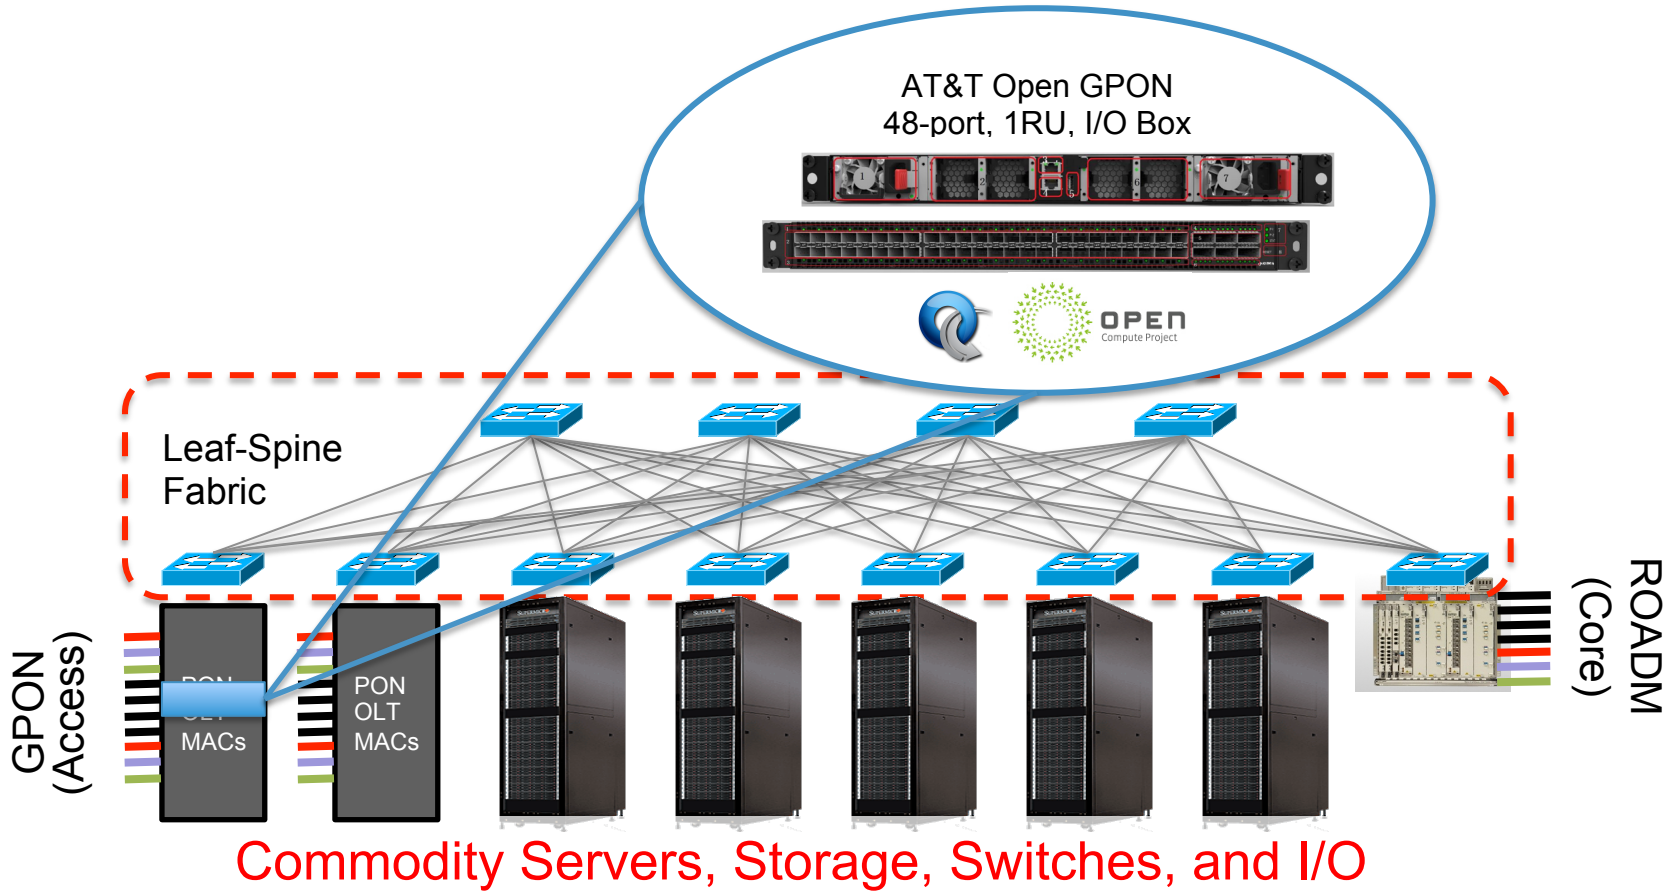

CORD Architecture – Organizing Principle

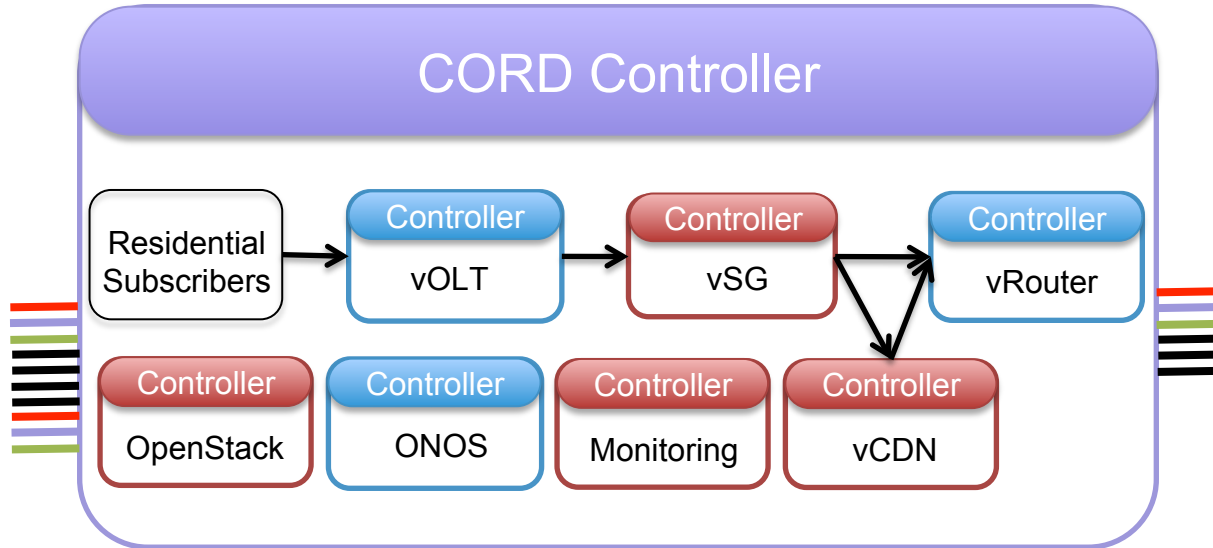

CORD Architecture – Organizing Principle

CORD Architecture – Hardware

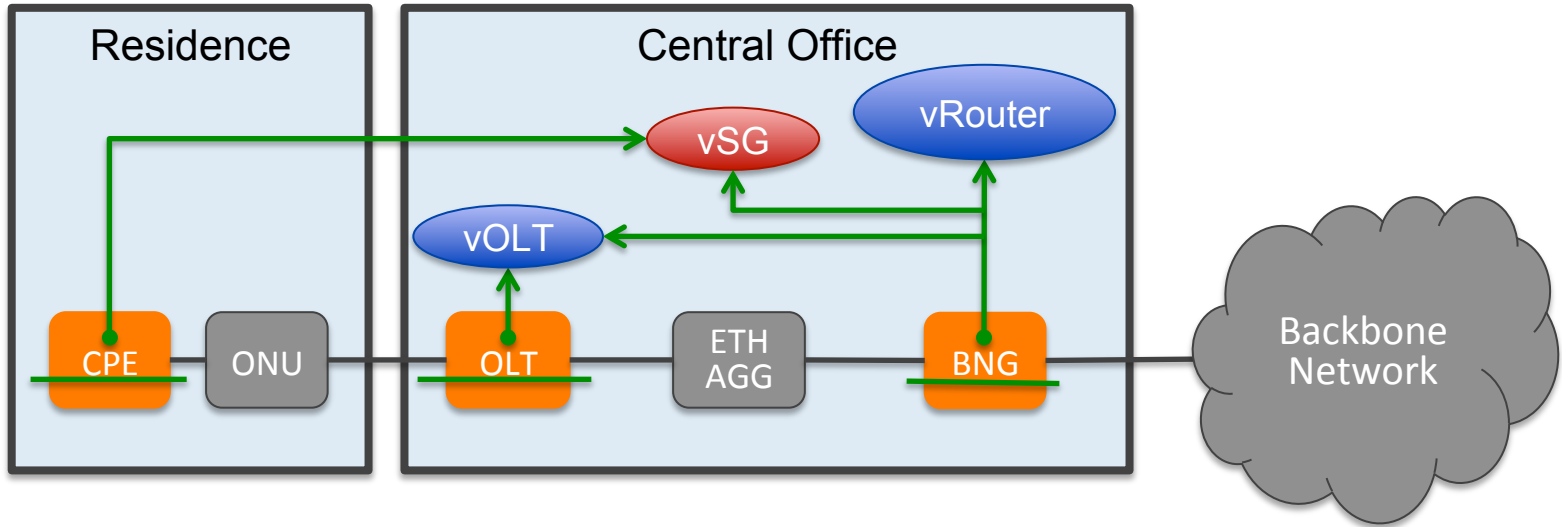

CORD Architecture – Software

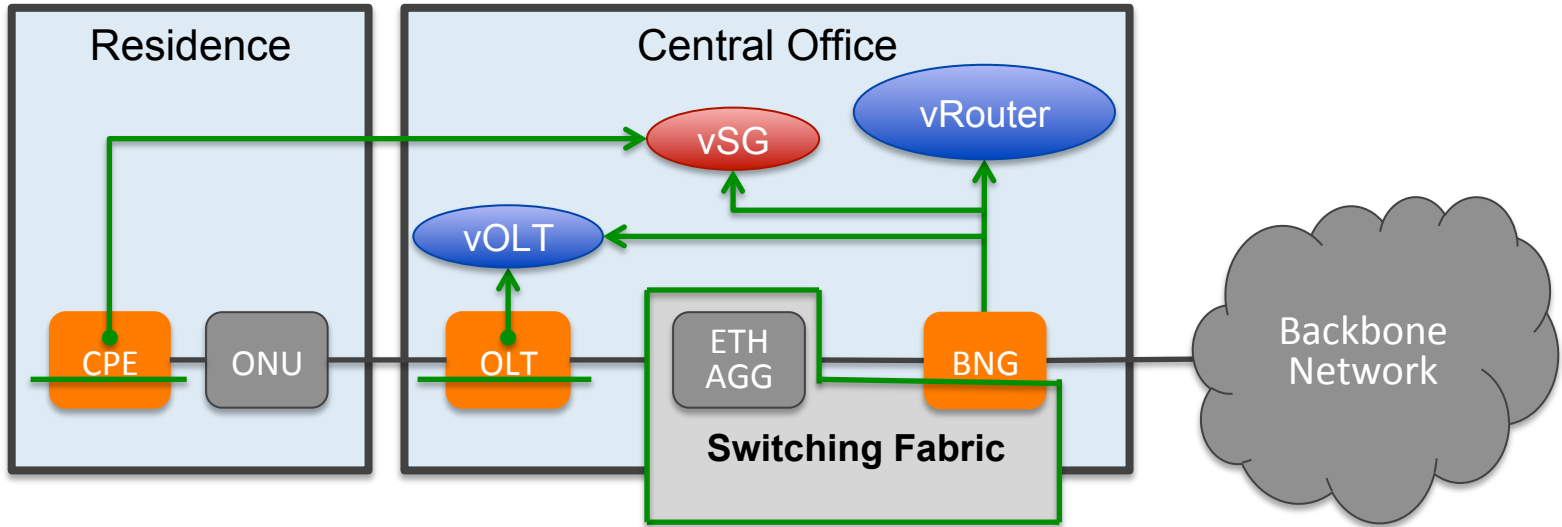

Everything-as-a-Service (XaaS)

Disaggregating the C.O.

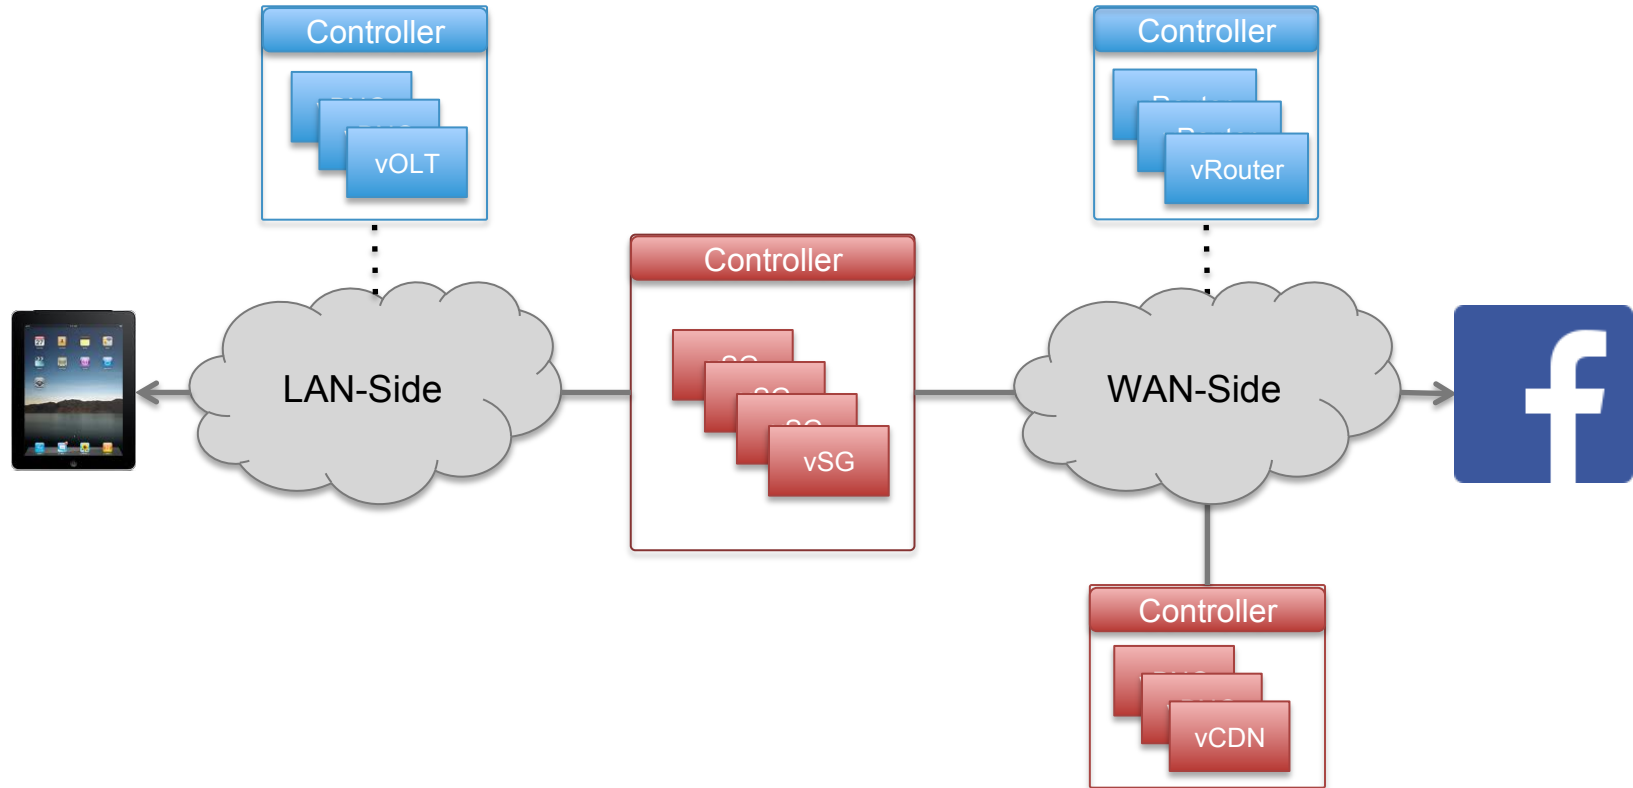

CPE – Customer Premises Equipment
OLT – Optical Line Termination
BNG – Broadband Network Gateway

Disaggregation

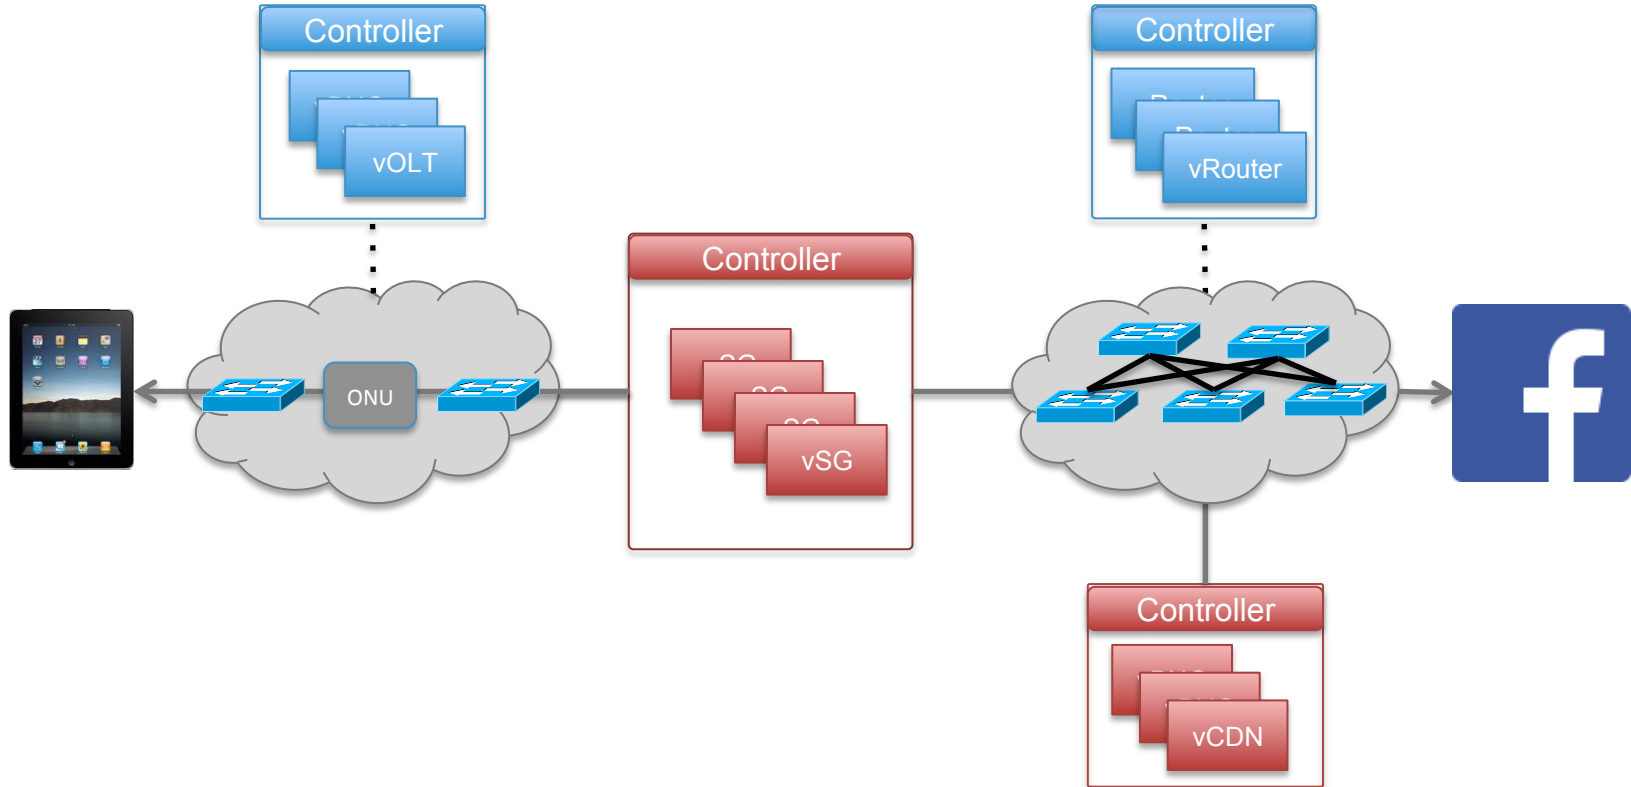

CPE – Customer Premises Equipment
OLT – Optical Line Termination
BNG – Broadband Network Gateway

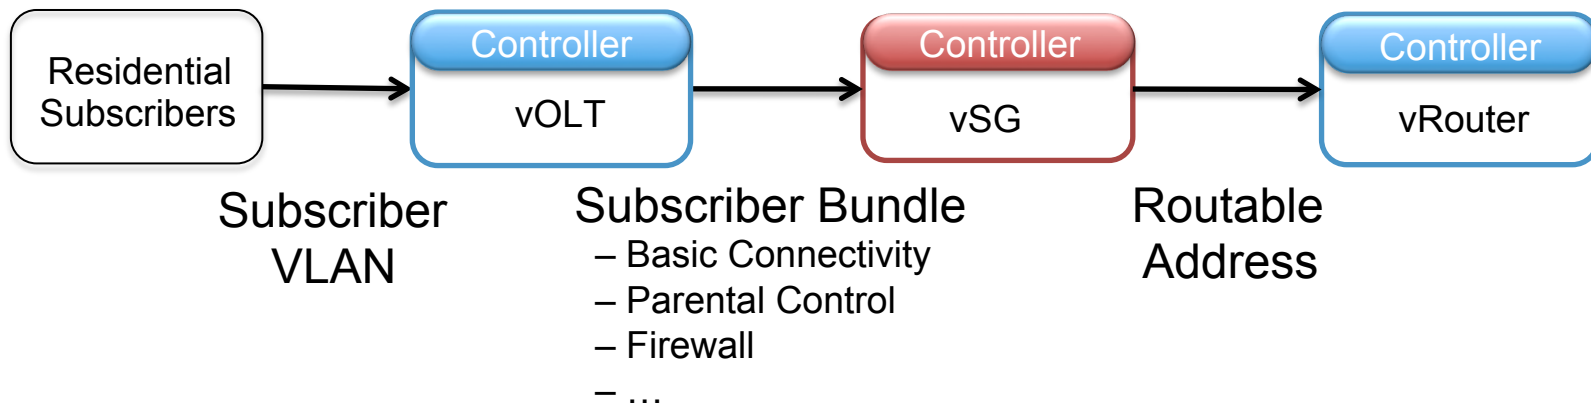

End-to-End Path

End-to-End Path

Services are Multi-Tenant

Service is an over-loaded term

Consumer Service

Multi-Tenant Cloud Service

Tenant is an over-loaded term

Business Unit – tenant of infrastructure

User – tenant of cloud service

Service *A* – tenant of Service *B*

CORD Architecture – Software

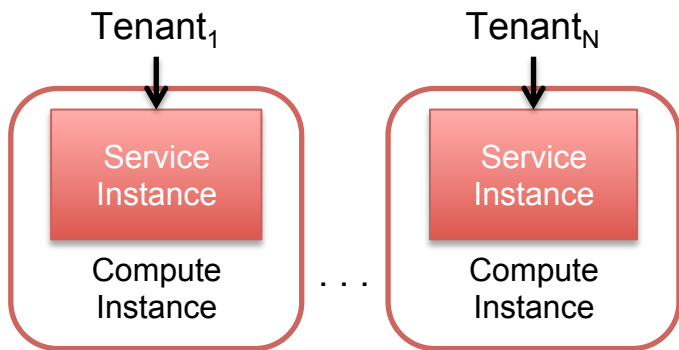

Everything-as-a-Service (XaaS)

CORD Architecture – Models

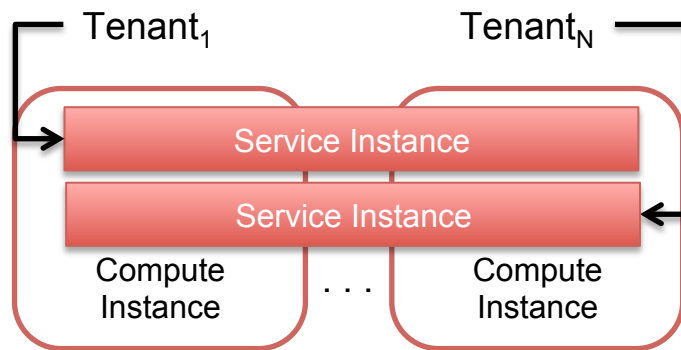

Service Graph =
(Tenants[] + Services[] + Dependencies[])

Data Plane Services

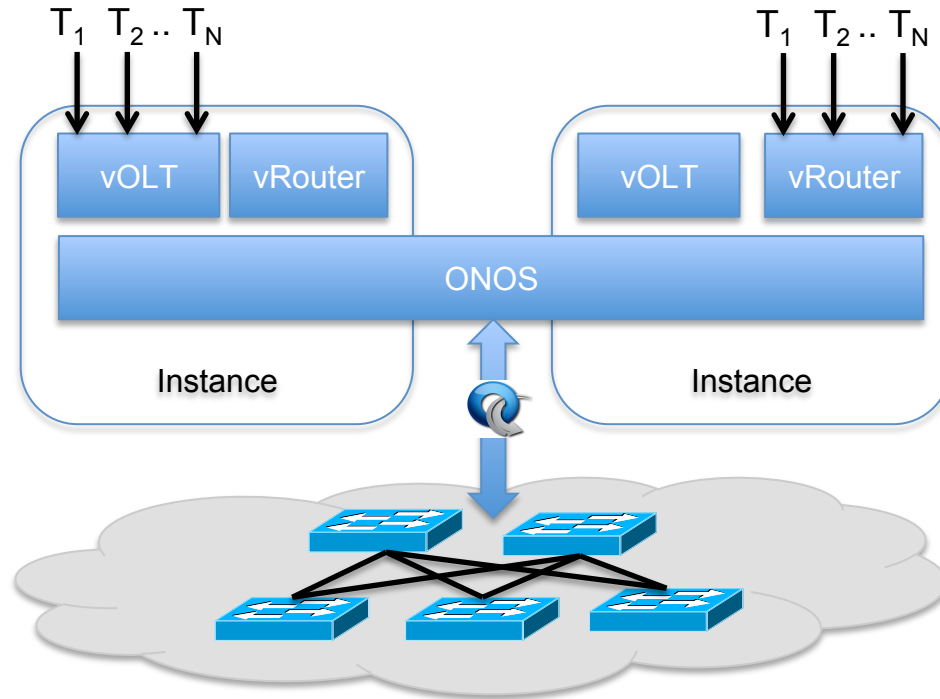

vSG
(Compute Instance = Container)

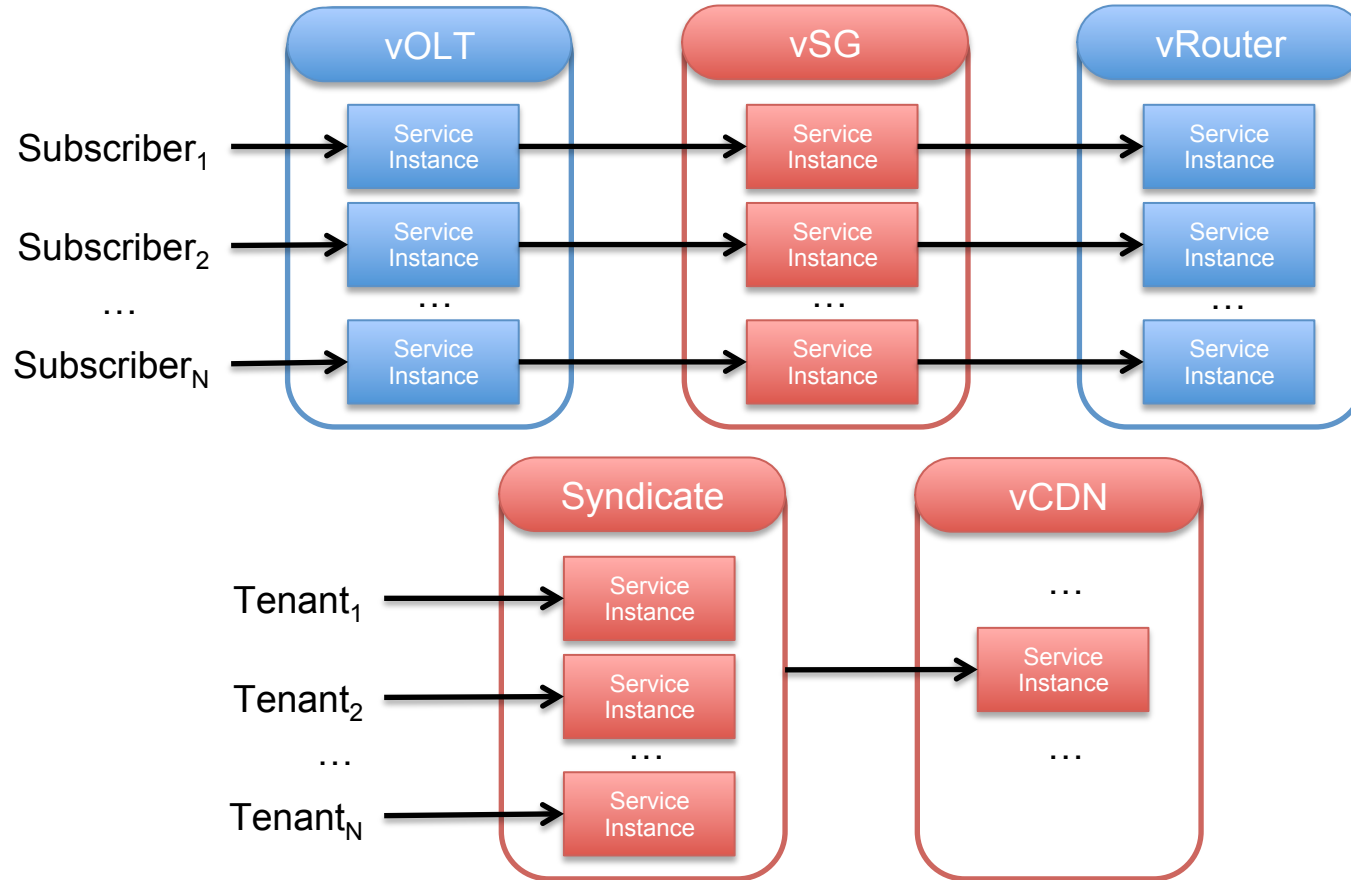

vCDN
(Compute Instance = VM)

Control Plane Services

Services as Tenants

Design Time Configuration Interface

On-Board Services and Configure Service Graph

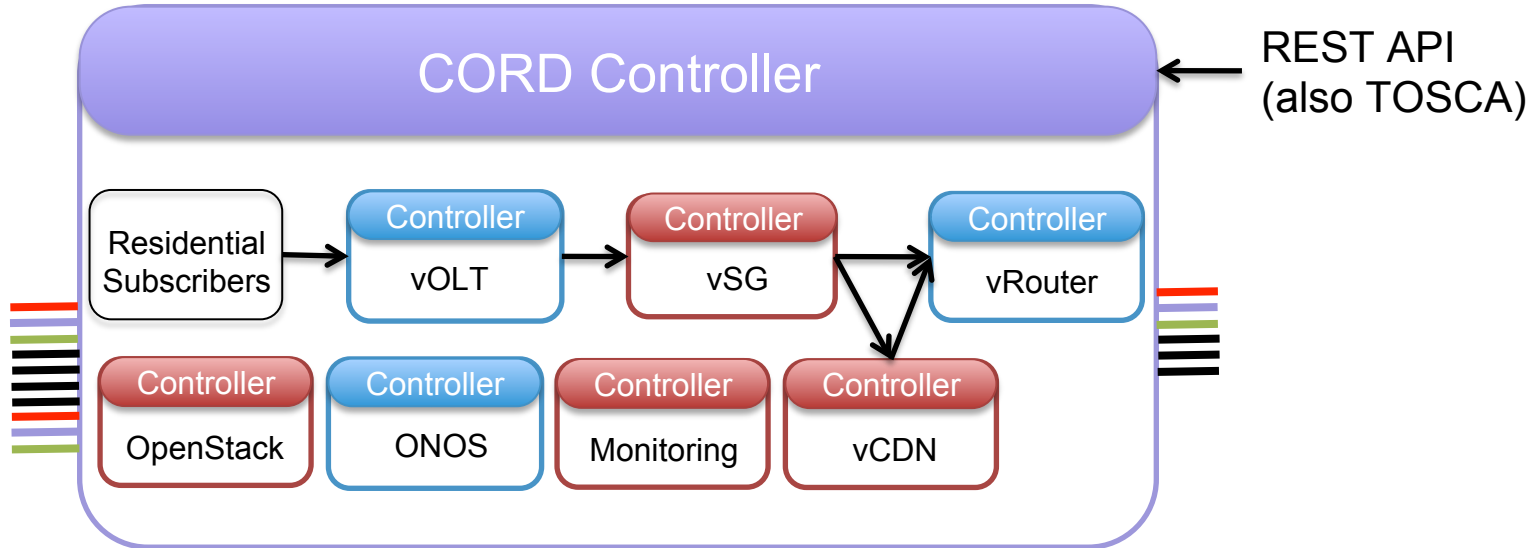

Runtime Control Interface

Provision and Scale Services

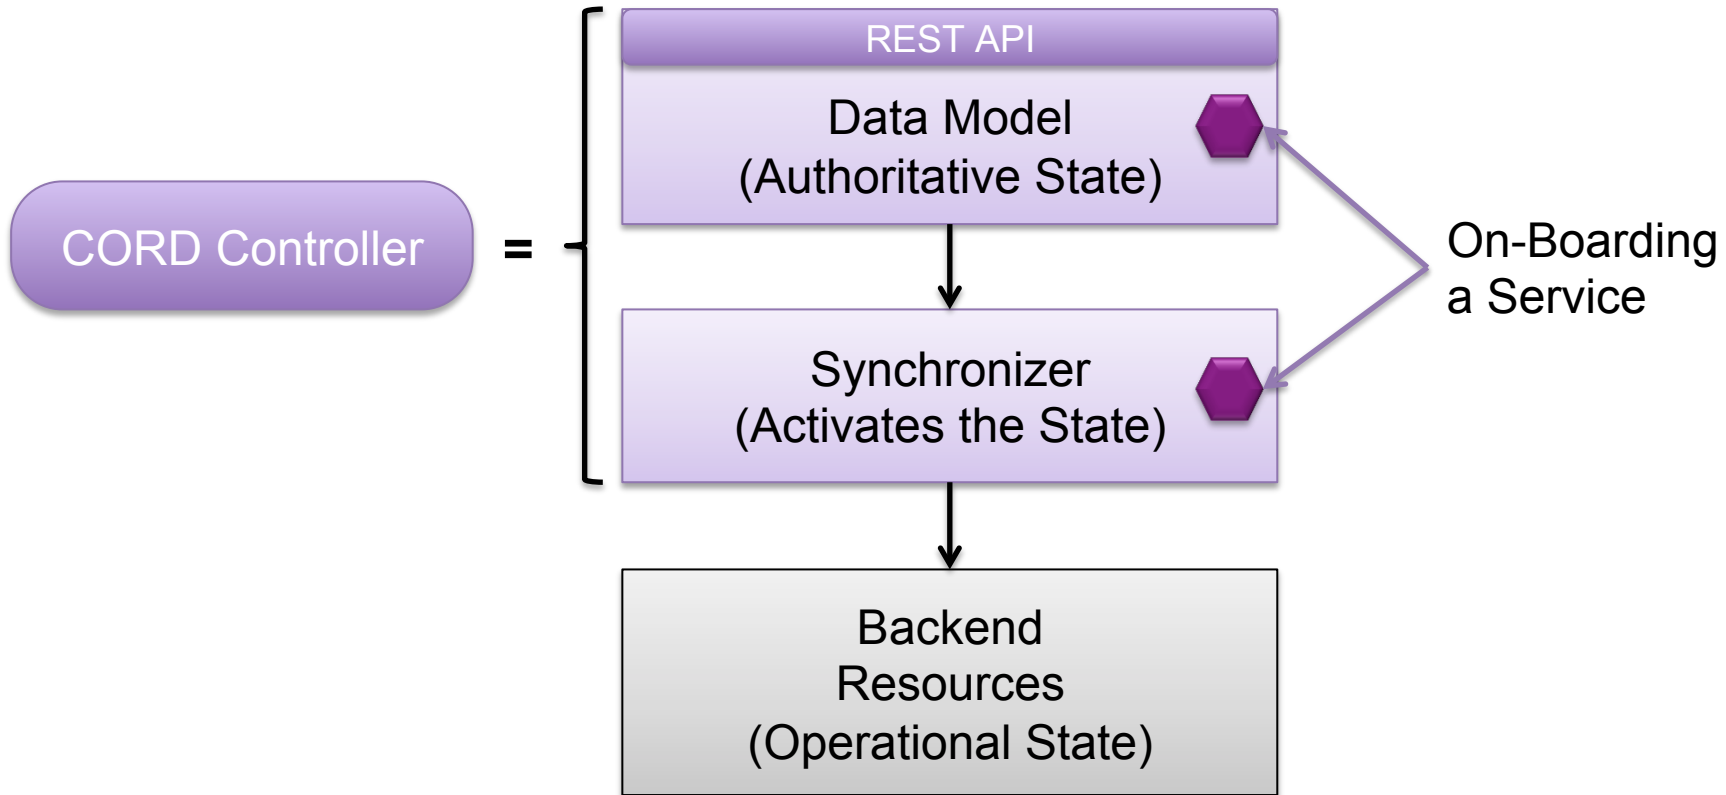

Instantiate and Manage Service Instances

Monitor Service Performance and Behavior

CORD Architecture – Interfaces

On-Boarding Services

Runtime Control – Subscriber API

GET <http://portal.cord.net:9999/api/tenant/cord/subscriber/1/>

Response:

```
{
  "humanReadableName": "John Doe"
  "id": 1
  "features": {
    "cdn": true
    "uplink_speed": 4000000000
    "downlink_speed": 10000000000
    "uverse": true
    "status": "enabled"
  }
  "identity": {
    "account_num": "123"
  }
  "related": {
    "instance_name": "mysite_vcpe"
    "vsg_id": 4
    "c_tag": "432"
    "instance_id": 1
    "wan_container_ip": null
    "volt_id": 3
    "s_tag": "222"
  }
}
```

Runtime Control – API Endpoints

../api/tenant/cord/subscriber

../api/tenant/cord/enterprise

...

../api/core/slices

../api/core/nodes

../api/core/instances

../api/core/services

...

../api/services/hpc

../api/services/vsg

../api/services/onos

...

Also a TOSCA-based interface
– Primarily used at design time

A Yang-based interface is in progress

CORD Reference Implementation

Hardware Blueprint ←

Bill of Materials

- OCP Servers

*Ciena and Radisys
to provide turnkey
CORD PODS*

CORD POD

*An open virtualized **service delivery platform** that provides cloud economies and agility.*

*From Access-as-a-Service
to Software-as-a-Service.*

*Configured for Different Domains:
Residential, Enterprise, Mobile*

→ Open Source Software

Core Components

- OpenStack
- Docker
- ONOS
- XOS

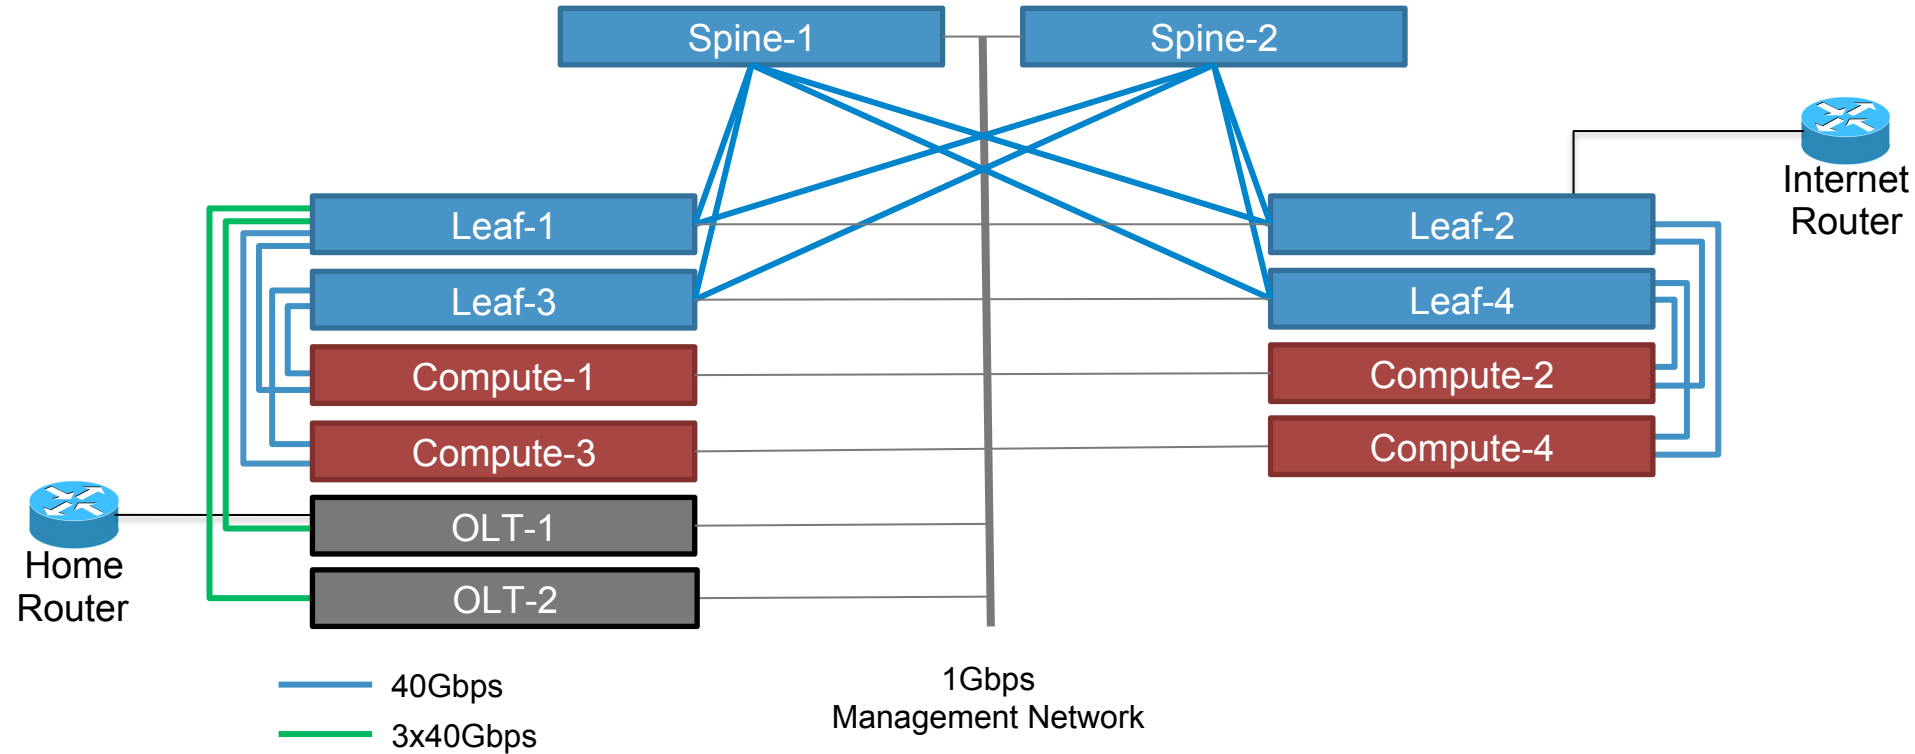

Access Services

- R: vOLT, vSG, vRouter
- E: vOAM, vCE,...
- M: vBBU, vPGW,...
- ...

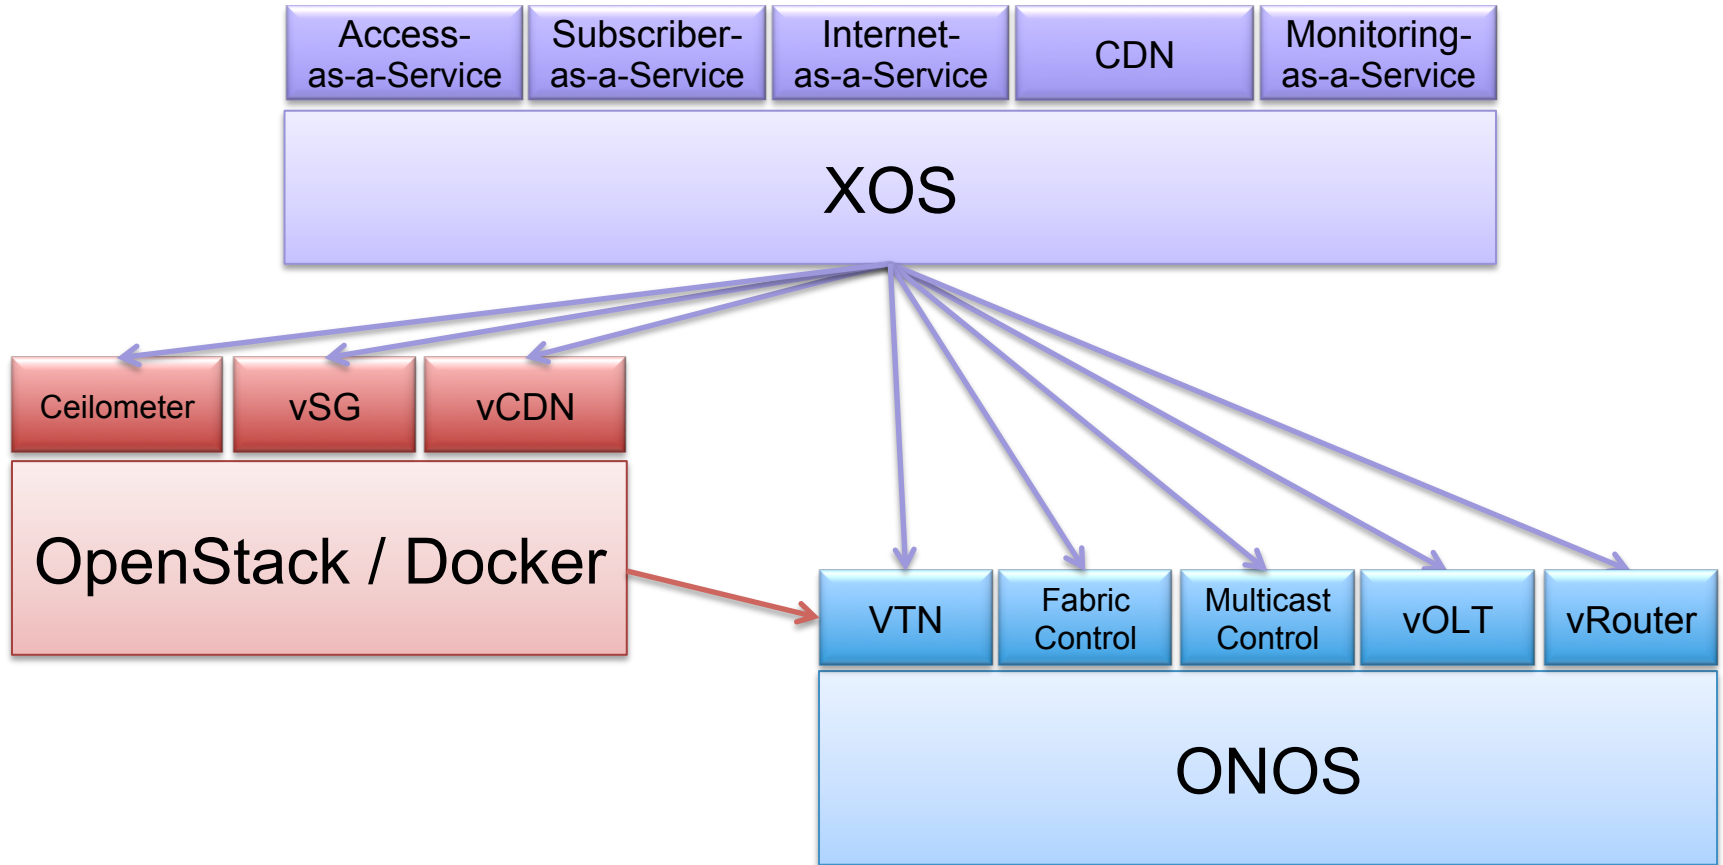

Other Services

- Monitoring
- ...

CORD POD – Hardware

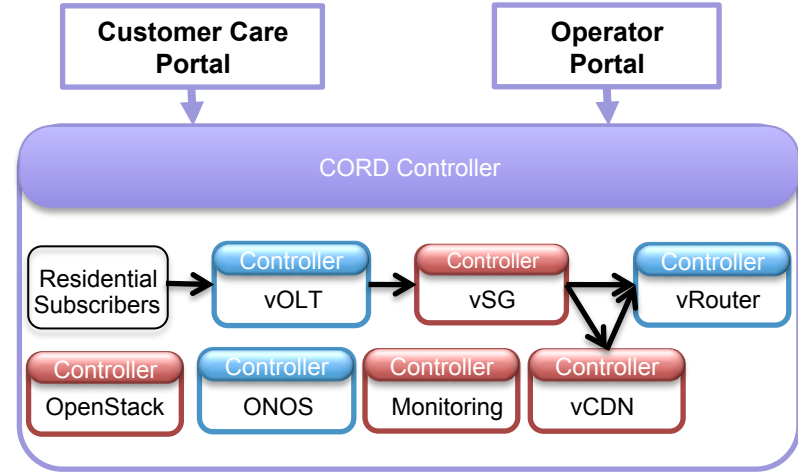

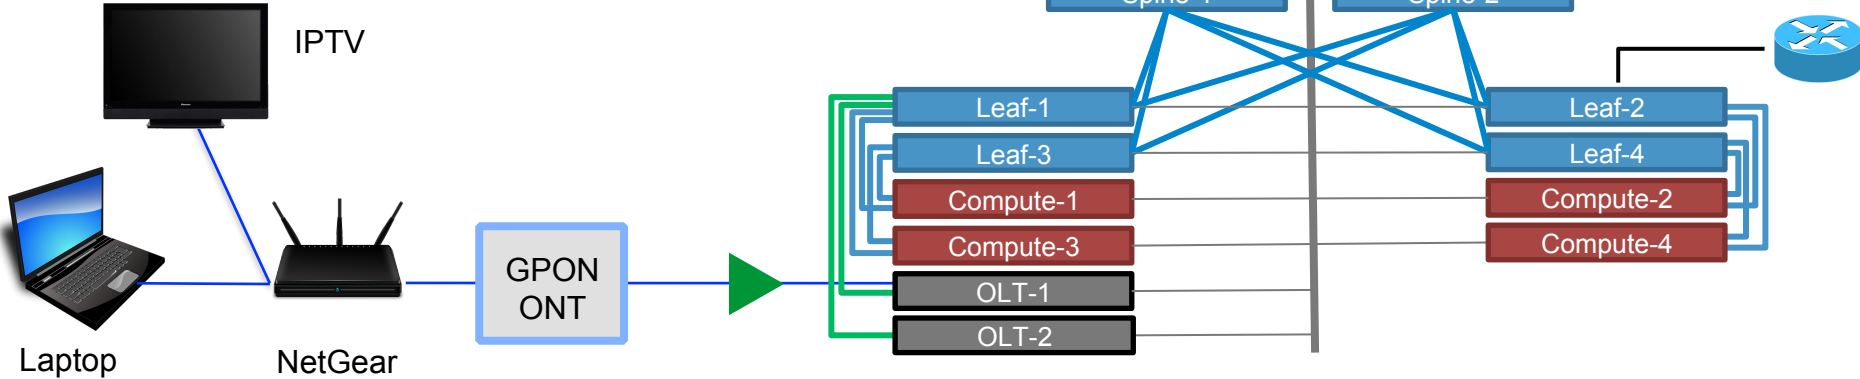

CORD POD – Software Stack

CORD – Field Trial

Access the Internet
Stream (Cached) Video
Watch TV

Domains of Use

Residential

vOLT, vSG,
vRouter, vCDN

Mobile

vBBU, vMME,
vSGW, vPGW,
vCDN

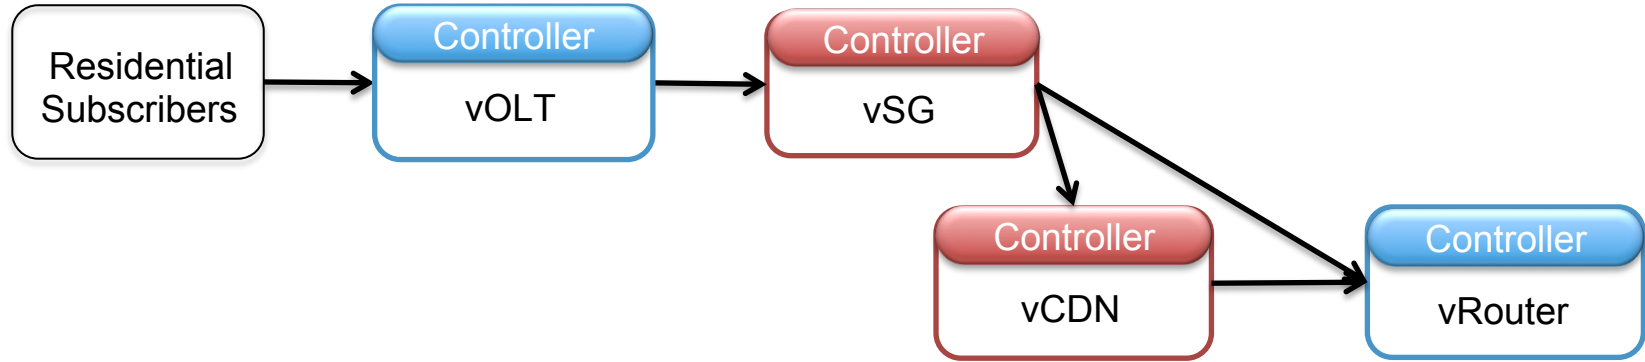

Enterprise

vCarrierEthernet,
vOAM, vWanEx,
vIDS

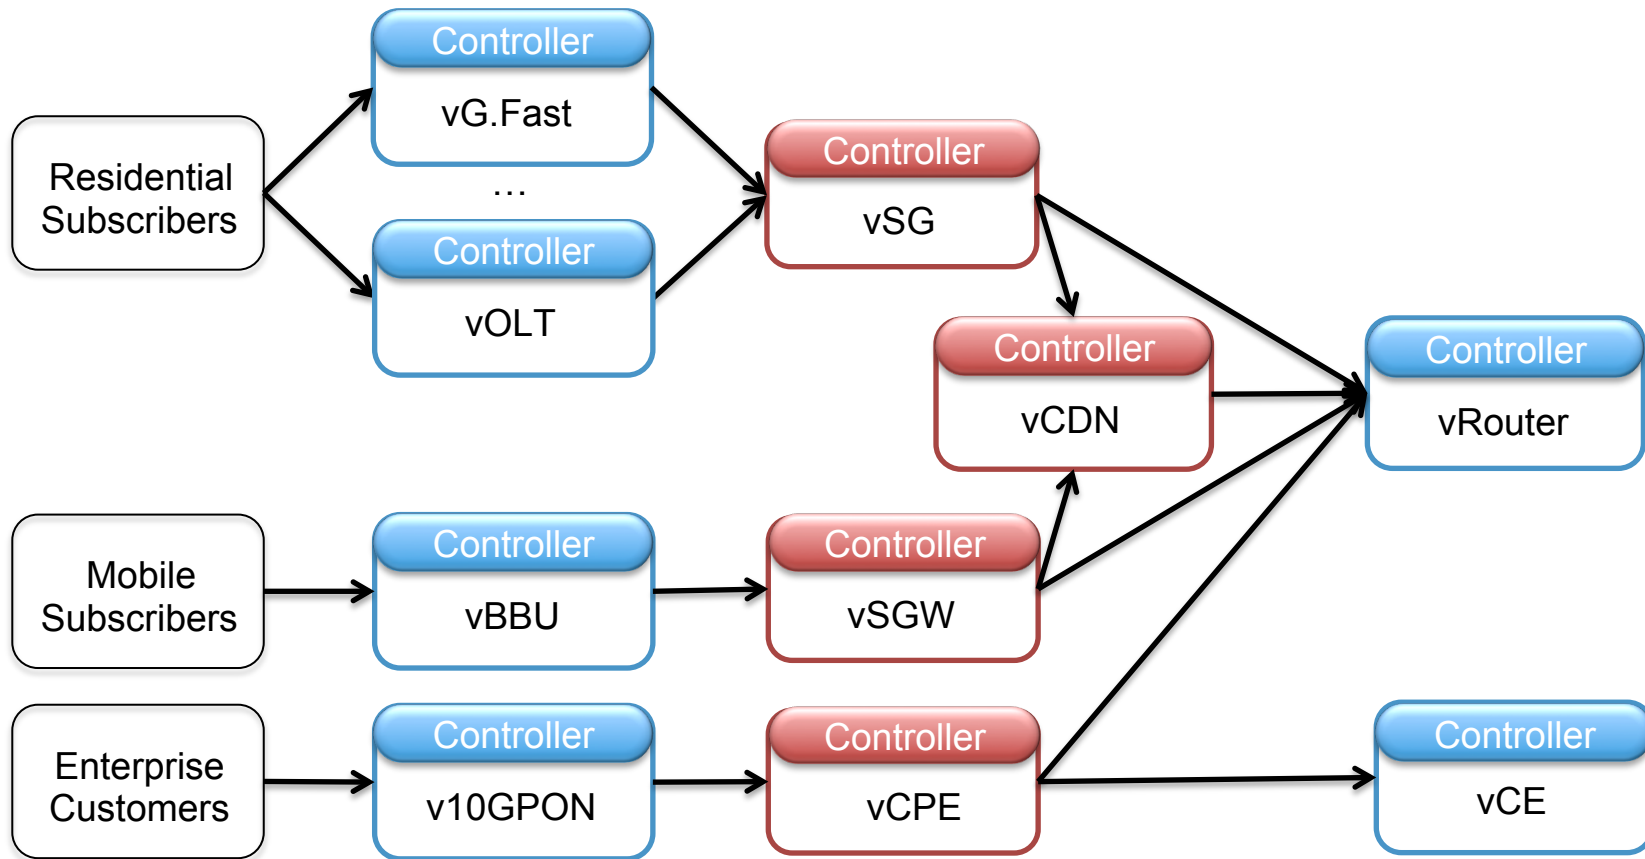

CORD Controller

CORD – Extensible Platform

CORD – Extensible Platform

Summary

CORD Provides Cloud Economies and Agility

- Fully Exploits Micro-Services (Access-as-a-Service)

- Fully Exploits Disaggregation (vOLT → vSG → vRouter)

- Fully Exploits SDN (overlay, underlay, services)

CORD Controller

- Assembles services from building block components

- Exports a unified interface to a collection of services

 - Operators specify service graph (configuration-time interface)

 - Operators and customers control services (runtime interface)
